Bachelor Degree in

Actuarial Science

Academic Year 2018/2019

President University now offers Actuarial Science, bringing together statistical and financial studies and introducing students to the industry.

Bachelor Degree program in Actuarial Science is offered by the Study Program of Actuary, School of Business, President University. The program contains the core of the Economics curriculum as well as the actuarial studies that prepares students for the actuarial career.

Actuaries, the Professional Life, Manage the Risk.

The future is uncertain and full of risk. Risk is the chance that an undesirable event will occur, but risk is also opportunity. That's where President University come in. Wherever there is risk, there are opportunities for actuaries and the recent financial crisis has further highlighted the skills actuaries bring to the table.

Not just insurance!

The first professionals managing risk and modeling the financial impact based on the likelihood of future scenarios. This discipline has a deep understanding of the nature of risk and excel at putting a value on a risk, regardless of the industry. While risk exists in all industries, no other industry handles the financial impact of risk more than the insurance industry, including traditionally specialized in life, health, property, and casualty insurance.

Growing demand for actuarial profession

The insurance industry can't function without actuaries. This is to calculate the costs and determine the premiums for policyholders; and while actuaries don't forecast the weather, they can tell how much expected to pay in claims.

Private corporations rely on the risk evaluation to frame their strategic management decisions. And because the judgment is highly valued, actuaries career paths often lead to upper management and executive positions.

Actuaries can help companies design pension and benefit plans, evaluate assets and liabilities, and stare down risk—all alongside top executives.

We also work for:

- Banks and investment firms
- Public accounting firms
- Labor unions
- Rating bureaus
- Shipping and air travel;
- Energy, such as utilities, oil, and gas;
- Environment, on issues such as climate change.
